working in unison’

## Landscape Architecture Services

enzygo provides specialist consultancy advice for landscape and visual impact assessment, landscape and urban design and landscape management. We operate internationally, producing high quality

landscape and visual advice and landscape design for a number of sectors including:

- Commercial Land and Property Development
- Waste Sector
- Minerals and Quarrying
- Renewable Energy
- Residential Developments
- Infrastructure Developments
- Leisure Developments

### Landscape Planning

Enzygo's principal service is the provision of a range of landscape planning services including the preparation of landscape strategy reports, landscape and visual assessments, landscape character assessments, historic setting assessments and night-time assessments as well as providing expert witness services.

We regularly work with architectural, planning, and engineering professionals on projects in the leisure, residential, commercial, infrastructure, energy, waste and mineral sectors providing landscape planning services.

### Environmental Co-ordination

Enzygo's landscape team contains experienced environmental consultants who have managed and co-ordinated a variety of environmental impact assessments (EIA) on a range of developments, including; highways infrastructure projects, retail and leisure developments, housing schemes, mineral and waste projects, energy projects and mixed use developments. Our skilled team will take responsibility for the organisation and delivery of EIA's and SEA's, including the management of the wider environmental team.

### Landscape Master Planning

We prepare Landscape Master Plans and Design Statements, providing an overview for the development, assisting in communicating the benefits of the proposals to statutory and non-statutory stakeholders. It is critical to get the landscape design in at the beginning.

We help our clients meet the challenges and demands of the planning process. Landscape planning assessment can drive the planning application and subsequently deliver positive results and conditions that can be properly discharged.

### Landscape and Urban Design

We provide a full range of landscape and urban design services from feasibilities and concepts to outline and sketch proposals, through to master planning and detailed design. Designs are prepared for both hard and soft landscape areas and include full planting plans, construction details, setting out drawings and specifications.

Our landscape design (architecture) team aim to provide a service that synthesises the arts, science and technical philosophies that seek to care for the Earth's landscape in an holistic, creative and sustainable manner.

### Contract Management

As a natural progression from the design services offered, Enzygo can provide all the necessary production information, tender and contract documents for the specific design. Following the tendering process our dedicated staff will oversee site operations and administer all contract procedures including processing valuations, and certificates. A clerk of works service is also available. Enzygo will provide our clients with a service carried out in an atmosphere of mutual trust and goodwill.

### Visualisation and Interpretation

Enzygo has access to a range of commercially available 2 and 3D modelling and visualisation tools. We visualise projects using a combination of:

#### Digital Terrain Modelling

Digital ground terrain models can be generated and then imported into 3DS Studio Max where the proposals can then be overlain.

#### Photomontages

A photomontage is the superimposition of a rendered, photo realistic, computer-generated model of a structure on to a baseline photograph.

#### Wireline Visualisations

Wireline visualisations are computer generated 3D outlines of a particular structure placed on top of a 3D ground terrain model.
